Sophie Farwell

Last Lecture Synopsis

MART 120

What I enjoyed most from the lax lecture was talking about the importance of coding in a creative way. I am definitely creative at heart and at first taking a coding class I was nervous that it would've been too formal for me to understand. The last lecture taught me that coding isn't just based on logic it has to do with problem-solving and thinking outside of the box. Learning about all the different jobs that you can have. Whether it's fashion, athletics or helping the community, coding goes above and beyond what I ever thought it could be.

What affected me the most is the importance of women in coding. Coding is a growing field since computer software has only been around for the past 30 years therefore it seems like in the last 5 to 10 years it is just now becoming a booming and exciting place for women to get involved. It is important to have representation in the technology field because diversity only enhances bigger and better ideas. I believe these were the most important things for me to learn, because I know coding is hard and it has to do with the functional elements of how to actually code but it is important to know the world that it impacts.
